

**Location**

**ProductLink**

**LocArea**

[The FK relationship between ProductLink and Location was removed for IHFS\_DB V1.1 on 6/25/1998 because entries are now made into ProductLink for forecast data from areas which are not represented in the Location table.]

[Affected areas related to a river forecast point.]

**UnkStn**

**LocDataLimits**

[Station or area ids which appear in the ingest data stream but are NOT in Location or GeoArea.]

[No FK because areas may have data limits too.]

**TextProduct**

**IngestFilter**

[The FK relationship between TextProduct and ProductLink IS NOT ESTABLISHED as expected because we do not always store the actual products being referenced for storage reasons.]

[Defines data types to ingest by station or area. No FK to Location because parent could be in GeoArea.]
